PROJECTS

Cluo — Investigative Case Management Ecosystem ↗

Avril 2026

Go, SvelteKit, Wails, PostgreSQL, Redis, AWS S3

- **Shipped 4 apps** (Go API, Wails desktop, mobile PWA, client portal) for private investigators — field capture, AI reporting, legal documents, and secure client delivery — from a single hexagonal backend.
- **Replaced manual reports** with an AI pipeline: transcribes field audio, extracts structured data (people, timelines, facts), pre-fills the report editor.
- **Automated the legal chain** (Estimate → Mandate → Contract → Invoice) as a state machine with per-document PDF generation and delivery.

Leviosa — Wellness Booking Platform ↗

Mars 2026

Go, SvelteKit, PostgreSQL, SQLite, Stripe, Redis, RabbitMQ, HashiCorp Vault, AWS S3

- **Decomposed a booking domain** into 5 bounded services (modular monolith) — one binary, port interfaces, and RabbitMQ for async.
- **Secured all PII at the app layer** using encx (AES-GCM + Argon2id, Vault) — no plaintext personal data ever reaches the database.
- **Integration tests against real adapters** (no mocks) catch DB-level bugs that unit tests miss.

Encx — Go Cryptography Library ↗

Décembre 2025

Go, AES-GCM, Argon2id, SHA-256, AWS KMS, HashiCorp Vault, AWS S3, SQLite

- **Eliminated encryption boilerplate** with `encx-gen`: parses Go ASTs, discovers annotated structs, emits typed `Process*Encx` / `Decrypt*Encx` functions.
- **Zero-downtime key rotation** via envelope encryption (DEK/KEK) behind a provider-agnostic KMS interface — per-record `KeyVersion` means no data migration needed.
- **Streaming encryption** (4 KB buffer) for binary payloads — pluggable storage backend with minimal memory overhead.

EDUCATION

CY Cergy Paris Université

Septembre 2021 – Juin 2022

Master 1 Mathématiques et applications

Cergy, France

Sorbonne Université (Campus Jussieu)

Septembre 2016 – Juin 2021

Licence de Mathématiques

Paris, France

PROFESSIONAL EXPERIENCE

Auto-Entrepreneur

Septembre 2022 -

Independent Hospitality Contractor

Paris, France

- **Delivered high-quality service** across 15+ establishments, adapting to high-pressure environments and diverse team structures.
- **Managed full business operations**, including client acquisition, contract negotiation, and financial reporting (URSSAF).
- **Consistently maintained 100% reliability** and professionalism in fast-paced, customer-facing roles.

TECHNICAL SKILLS

Languages/Frameworks: Javascript, Go, Python, C, SQL

Developer Tools: Neovim

Technologies/Frameworks: Linux, GitHub, SvelteKit, NodeJS, Git, SQLite, PostgreSQL, Docker, Ansible, Terraform
